

the URBES project

URBES Training Sessions on
Urban Biodiversity and Ecosystem
Services powered by ICLEI and IUCN

- ✓ Highly interactive, practice oriented.
- ✓ Including field trips, peer reviewing, best practice exchange and updates on state-of-the-art knowledge and initiatives.

The URBES project, the leading European science-policy network on urban biodiversity and ecosystem services, is hosting a series of unique training sessions in 2013 / 2014.

2nd URBES TRAINING SESSION Ecosystem Services support Urban Resilience – Visualise the CHANGE

27- 28 May
2014, Bonn
Gustav Stresemann
Institute

A unique opportunity to
exchange with Europe's
leading scientists!

27.5. URBES one day training session

28.5. URBES Session at the Open European Day

The training will consist of two learning opportunities:
A one day training session on ecosystem services and urban resilience hosted by the URBES project, followed by the option of participating in the Open European Day on Climate Change Adaptation.

Either of these events can be attended individually and both are free of charge!

The training session is primarily aimed at representatives from local authorities, but other participants are also welcome. It will focus on urban ecosystem services in resilience modeling, GIS supported decision making etc. URBES researchers will share their latest scientific knowledge with the audience. It will be a unique opportunity to exchange views and experiences between research and practice to visualise change.

The European Day is a pre-event to the Resilient Cities Conference, where peer-to-peer exchange on different urban approaches towards climate change adaptation will take place.

URBES is a three-year research project funded by BiodivERsA that aims to bridge the knowledge gap on the links between urbanization, biodiversity and ecosystem services. It informs urban managers and decision-makers on how to best integrate the natural environment and human needs. The project consortium consists of world-leading research institutes on sustainable urban development, based in Europe and the USA (New York). Follow us on Twitter: @URBESproject
